Which Data?

Slide acknowledgment: Andrea Goethals

Assortment of Data Types?

- Survey data
- Weather measurements
- Computer models
- Simulation outputs
- Software
- Input data
- Federated queries
- Geospatial data
- Enumerations
- Vital statistics
- Interviews
- Transcripts
- Medical and genetic data
- Scripts
- Administrative records
- Field data
- Bio images
- Experimental data
- Spreadsheets
- Visualizations
- Instrument outputs
- Structured data products
- Database
- Quantitative tabular data
- Qualitative data
- Recordings

The Dataverse Network

The Dataverse Network

A repository for research data that takes care of long term preservation and good archival practices, while the researcher keeps control of and gets recognition for his data

Replication data for: Poverty and Support for Militant Politics: Evidence from Pakistan
 by Graeme Blair; C. Christine Fair; Neil Malhotra; Jacob N. Shapiro
 Abstract: Policy debates on strategies to end extremist violence frequently cite poverty as a root cause of support for the perpetrating groups. There is little evidence to support this contention, particularly in the Pakistani case. Pakistan's urba...Continue [+]

MEASURE Evaluation Dataverse

networkAdmin Admin

MEASURE Evaluation is the USAID Global Health Bureau's primary vehicle for supporting improvements in monitoring and evaluation in population, health and nutrition worldwide. We help to identify data needs, collect and analyze technically sound data, and use that data for health decision making. Some MEASURE Evaluation activities involve the collection of innovative evaluation data sets in order to increase the evidence-base on program impact and evaluate the strengths and weaknesses of recent evaluation methodological developments. Many of these data sets may be available to other researchers to answer questions of particular importance to global health and evaluation research. Some of these data sets are being added to the Dataverse on a rolling basis, as they become available.

DATA MANAGEMENT CHALLENGES

- Funding agencies and journal publishers are placing additional demands on researchers for data sharing and access
- Data-intensive science has enabled collaborative research that crosses disciplinary and institutional boundaries
- Researchers do not have access to or are unaware of tools and services to help manage their data
- Discipline specific customization to tools
